Education

Mar 2016 - Dez 2019

IFSUL / Federal Institute of Southern Rio Grande do Sul
Formed Technician Information Technical at IFSUL integrated with high school.
– Brazil

Oct 2023 - Feb 2026

UNOPAR/ University of Northern Paraná
Undergraduate Systems Analysis and Development at UNOPAR College.
– Brazil

Sep 2026 - Present

UNA / Una University Center
Postgraduate Certificate in Cloud-Native Architecture and Platform Engineering
– Brazil

Profile

Platform and Cloud Engineer with experience in AWS, DevOps, infrastructure automation, cloud-native technologies, and on-premises and self-hosted solutions. Bachelor's degree in Systems Analysis and Development, currently pursuing a postgraduate degree in Cloud-Native Architecture and Platform Engineering, with AWS certifications.

Experienced in AWS, Kubernetes, Terraform, AWS CDK, GitHub Actions, GitOps, and observability, with a focus on building scalable, resilient, and secure platforms across cloud and hybrid environments while improving developer experience and operational efficiency.

Professional Experience

Feb 2026 – Present

Remote

DevOps Engineer at Ierian.studio

Senior DevOps Engineer focused on Platform Engineering, automation, and cloud-native architecture, designing resilient, secure, and scalable platforms using Kubernetes, GitOps, Infrastructure as Code, and SRE practices. Responsible for CI/CD platforms, reusable automation, engineering standards, and internal tooling focused on developer experience, governance, security, and reliable software delivery.

Strong experience with Kubernetes, Terraform, Go (Golang), Helm, ArgoCD, and GitHub Actions, including distributed architectures, workload orchestration, autoscaling, high availability, networking, secrets management, and declarative infrastructure.

Hands-on experience building automated release validation platforms integrating Kubernetes operators, AI agents, K6 performance testing, and Chaos Engineering. Experienced with observability using OpenTelemetry, Prometheus, and Grafana, as well as DevSecOps, software supply chain security, and container hardening.

Also experienced with self-hosted and hybrid infrastructure, Tailscale/tailnet, Proxmox, and AI integration for engineering automation and platform efficiency.

Apr 2021 – May 2026

Remote

Cloud Engineer at caf.io

Worked with AWS cloud infrastructure, automation, security, and governance, using AWS CDK (TypeScript), Terraform, and CloudFormation for Infrastructure as Code. Experience with EKS using Karpenter, Helm, ArgoCD, and ALB Controller, as well as ECS with Auto Scaling Groups and load balancers. Worked with AWS networking, including VPCs, NAT Gateways, VPC Endpoints, Transit Gateway, and routing.

Experience with AWS Organizations, Control Tower, SCPs, AWS Config, SSM Automation, Lambda, Step Functions, Identity Center, Service Catalog, IAM, S3, and WAF. Also worked with cost optimization and monitoring, SQL and NoSQL databases, self-hosted VPNs, automation using Python and Bash, and CI/CD pipelines with GitHub Actions.
